

DISTILLERS GRAINS TECHNOLOGY COUNCIL

POULTRY

Distillers dried grains is an all natural, high quality and very effective feed ingredient for both chickens and turkeys. Over 50 years of successful feeding trials at major universities has consistently shown it to be a useful and economical source of protein, fat and beneficial unidentified growth and health factors for poultry. Distillers dried grains is high in methionine, an amino acid required for adequate feathering. Rations balanced with essential amino acids, such as lysine, and energy levels can utilize 10-20% in broiler and layer poultry feed formulations.

DISTILLERS DRIED GRAINS UNIQUE BENEFITS

- Originates from all natural grains; corn, milo, wheat, rye and barley
- Distillery process concentrates grain protein to 26-30% and 8-10% fat
- Fermentation process adds 3-5% dried yeast cells high in B-vitamins
- High methionine content provides partial replacement for deficient soybean meal
- Economical cost - 1/2 – 2/3 cost of soybean meal
- Excellent palatability due to yeast fermentation flavors
- Provides improved egg quality and reduction in fatty liver problems
