

**Distillers Grains Technology Council  
Presentation Abstract**

**AAFCO Distillers Grains Ingredient Definitions-What is and is not covered.**

**The ethanol industry continues to evolve at a very rapid pace. Processes continue to change, new technologies are being discovered, new feed stocks and process aids are being experimented with and the distiller's grains are changing with them. All this variation in the distiller's products can create confusion with the people trying to feed it. Do we need to create new definitions? If we do, what is the process?**
